Paul K. Wright is the Acting Director of CITRIS—the Center for Information Technology in the Interests of Society. It serves 4 UC campuses and hosts many multi-disciplinary projects on large societal problems such as healthcare, services and intelligent infrastructures such as energy, water and sustainability. He is a professor in the mechanical engineering department, where he holds the A. Martin Berlin Chair. Wright also serves as co-director of the Berkeley Manufacturing Institute (BMI) and co-director of the Berkeley Wireless Research Center (BWRC). From 1995 to 2005 he served as co-chair of the Management of Technology Program (a joint program with the Haas School of Business). His research and teaching are in high-tech product design and rapid manufacturing, automated factories, and automated buildings. Currently, he and his colleagues are designing and prototyping wireless systems for "demand response power management" throughout California, funded by PIER/CEC (the Public Interest Energy Research program of the California Energy Commission). Born in London England, he attended Birmingham and Cambridge Universities prior to previous U.S. faculty positions at New York University and Carnegie Mellon University. He is a Fellow of the ASME and the SME and a member of the National Academy of Engineering.
